IN THE SPECIFICATION

I.   In the "Abstract of the Disclosure" section, please amend as follows:

~~An~~ A client-driven ~~advanced primary nurse care~~ system and process ~~is disclosed which is client-driven~~ for processing a number of clients in a timely manner with enhanced healthcare outcomes. ~~The system and process are sized to provide~~ for providing ~~an~~ optimum patient flow and healthcare outcome. The system includes a ~~computer network having a central system computer. A computer program resides on the system computer for creating a real-time client record as the client proceeds through the system and process. There is a~~ client station ~~connected in the computer network~~ where ~~the~~ a client record is ~~initially~~ created ~~and accessed on subsequent visits using a unique~~ having a client ID code. A client station display monitor displays medical questions regarding the client's health ~~state~~ whereupon the client inputs responses to the questions into the client record. A nurse station ~~is connected in the computer network for receiving~~ then receives the client ~~in the healthcare flow~~ for collecting vital signs and other laboratory information. There is a nurse station input device provided for inputting the information into the client record. There is a practitioner station ~~connected in the computer network~~ where the client record is accessed and displayed to a medical practitioner and the client during an examination and consultation. Exam data ~~originating at the practitioner station~~ is input into the client record ~~such as prescriptions and alternative remedies.~~ by the medical practitioner. ~~At the end of the visit, the~~ The client leaves with a take-home report compiled from the real-time client record containing the information needed for the client's healthcare.
